PROFESSIONAL SUMMARY

Backend Engineer with experience building and validating production systems. Including a multi-layer validation engine (schema integrity, data normalization) at Systems Limited. Proficient in Python, Node.js/Express.js, REST API design, with experience integrating AI/LLM services & automation into backend pipelines. BS Software Engineering, FAST-NUCES, 2026.

TECHNICAL SKILLS

- **Backend:** Python (FastAPI, Flask), Express.js, RESTful API Design, JWT Authentication, Rate Limiting, Web Scraping
- **Databases & Infrastructure:** PostgreSQL, MongoDB, SQLite, Docker, Kubernetes, AWS Rekognition, Git
- **AI Engineering:** RAG Pipelines, LLM Integration (Groq, Gemini, Cohere), Multi-Agent Systems, Vector Databases (FAISS, Qdrant), Sentence Transformers, Cohere Embeddings, Prompt Engineering, NLP, TensorFlow, Hugging Face

EXPERIENCE

Software Engineering Intern @ Systems Limited | Islamabad, Pakistan (06/2025 - 08/2025)

- Engineered a multi-layer validation engine (AI semantic checks, schema integrity, data normalization) across an Express.js, SQLite, and React stack, refined through iterative review cycles
- Built SPECmate, an automated LLM-powered SRS artifact generator (Llama3-70B via Groq) auto-producing test cases, use cases, and functional modules from raw requirements documents.

Full-Stack Python Intern @ Research Lab | Remote (06/2026 – 08/2026)

- Built EcoTrack, a cross-platform desktop application (PyQt6) that monitors running system processes and calculates real-time CO₂ emissions using IEA grid carbon-intensity factors, with historical analytics and data export
- Delivered across iterative releases, incorporating review feedback across UI, database error handling, and packaging to ship a stable build.

PROJECTS

SEOMation AI SEO Content Automation Platform (Express.js, Flask, Groq, PostgreSQL) (08/2025-02/2026)

- Built a 3-service content-automation platform (Express.js/PostgreSQL backend, Python AI service, React frontend), including a multi-engine research pipeline feeding structured JSON to an LLM content generator with an automatic repair pass for malformed responses & output consistently scores 85+ on SEO analysis tools.
- Built an event-driven Node.js scheduler with retry/backoff and missed-job recovery for reliable autonomous publishing, plus a post-generation quality scorer for grammar, readability, and citation accuracy.

Multi-Agent AI Orchestration System (FastAPI, LangGraph, Gemini API, ChromaDB) (09/2025-11/2025)

- Co-engineered Gemini-powered orchestration for a 13-agent educational AI system: single-call intent dispatch with confidence scoring and conversational clarification, cutting latency and cost, added a two-tier memory layer (short term session recall, per-agent long-term store) for context continuity.

Image Moderation App (FastAPI, MongoDB, AWS Rekognition, Docker) (05/2025)

- Built a role-based image-moderation platform (FastAPI, MongoDB) with a JWT authentication system and token-management APIs, supporting concurrent image analysis with automated usage logging and admin/user role separation.
- Integrated AWS Rekognition for automated unsafe-content detection (95% accuracy) and containerized with Docker.

EDUCATION

BS Software Engineering - FAST-NUCES Islamabad (June 2026)

Relevant Courses: Cloud Computing, Applied AI, Data Structures & Algorithms, Database Systems, Software Design

CAMPUS COMMUNITY INVOLVEMENT & CERTIFICATIONS

Technical Workshop Team - Google Developer Student Club (09/2024 - 04/2025)

[Generative AI for Software Development](#) (Coursera), [AWS Cloud Practitioner](#) (Credly)
