PROFESSIONAL SUMMARY

AI Application Engineer with experience building LLM-powered systems. SRS generator processing raw docs, built a central orchestrator for a 13-agent academic AI system, and an autonomous SEO pipeline using SERP scraping and vector retrieval. Focused on LLM integration, multi-agent architecture, and RAG. BS Software Engineering, FAST-NUCES 2026.

TECHNICAL SKILLS

- **AI Engineering:** RAG Pipelines, LLM Integration (Groq, Gemini, Cohere), Multi-Agent Systems, Vector Databases (FAISS, Qdrant), Sentence Transformers, Cohere Embeddings, Prompt Engineering, NLP, TensorFlow, Hugging Face
- **Backend:** Python (FastAPI, Flask), Node.js, RESTful APIs, JWT Auth, Rate Limiting, Web Scraping, Semantic Search
- **Databases & Tools:** PostgreSQL, MongoDB, SQLite, Docker, AWS Rekognition, Git

EXPERIENCE

Software Engineering Intern @ Systems Limited | Islamabad, Pakistan

(06/2025 - 08/2025)

- Built SPECmate, an LLM-powered SRS artifact generator (Llama3-70B via Groq) auto-producing test cases, use cases, and functional modules from raw requirements documents.
- Engineered a multi-layer validation engine (AI semantic checks, schema integrity, data normalization) across Express.js, SQLite, React stack, refined through iterative review cycles.

PROJECTS

SEOmatic AI SEO Content Automation Platform (Express.js, Flask, Groq, PostgreSQL)

(08/2025-02/2026)

- Built a multi-engine research pipeline web scraping, feeding a Gemini/Groq content generator with per-platform structured JSON output and an automatic repair pass on malformed responses; content consistently scores 85+ on other SEO analysis tools across WordPress and LinkedIn targets
- Added a post-generation quality scorer (grammar, readability, citation accuracy) and an event-driven Node.js scheduler with retry/backoff and missed-job recovery for reliable autonomous publishing.

Multi-Agent AI Orchestration System (FastAPI, LangGraph, Gemini API, ChromaDB)

(09/2025-11/2025)

- Co-engineered Gemini-powered orchestration for a 13-agent educational AI system: single-call intent dispatch with confidence scoring and conversational clarification, cutting latency and cost, added a two-tier memory layer (short term session recall, per-agent long-term store) for context continuity.

FYP Handbook RAG Q&A System (Python, FAISS, Sentence-Transformers, Groq)

(11/2025)

- Built the RAG pipeline as 2-person team: chunked and embedded the handbook with Sentence-Transformers, indexed it in FAISS for cosine-similarity top-K retrieval, and integrated Groq's Llama 3.1 for cited answer generation.
- Added an embedding cache that serves repeat queries in $\approx 1\text{ms}$ vs. $\approx 1.2\text{-}1.4\text{s}$ for a full cold query, plus retry logic with exponential backoff and rate limiting (10 req/min global, 20 req/hour per-user) for stability.

Detecting AI-Generated Text BERT vs. RoBERTa (Python, PyTorch, Hugging Face)

(10/2025)

- Co-developed fine-tuned BERT & RoBERTa classifiers on 17K+ samples (Kaggle), reaching 99% validation accuracy.
- Diagnosed severe overfitting via regularization experiments (weight decay, dropout, gradient clipping) after near-random OOD accuracy exposed dataset-specific artifacts.

EDUCATION

BS Software Engineering - FAST-NUCES Islamabad

(June 2026)

Relevant Courses: Generative AI, Applied AI, Data Structures & Algorithms, Database Systems, Software Design

CAMPUS COMMUNITY INVOLVEMENT & CERTIFICATIONS

Technical Workshop Team - Google Developer Student Club

(09/2024 - 04/2025)

[Generative AI for Software Development](#) (Coursera), [AWS Cloud Practitioner](#) (Credly)
